LIST OF PUBLICATIONS PUBLISHED BY THE BUSINESS STATISTICS BRANCH

Business Conditions

The Monthly Review of Business Statistics.—A statistical summary with charts, text, and tables covering 1,400 factors on current conditions in Canada.

Special Supplements.—Twelve Years of the Economic Statistics of Canada 1919-30; Monthly Indexes of the Physical Volume of Business in Canada, 1919-32; Original Monthly Statistics of Chief Economic Importance, 1919-33; Recent Economic Tendencies in Canada, 1919-34. Economic Fluctuations in Canada during the Post-war period, 1919-1938.

Economic Conditions

Economic Conditions in Canada during Elapsed Months of Current Year, Monthly, containing recent releases regarding National Income.

Bank Debts.—Monthly and Annual Reports of Bank Debts to Individual Accounts at the Clearing-House Centres of Canada, Bank Clearings and the Equation of Exchange, Analysis of Bank Debts.

Commercial Failures.—Monthly and Cumulative Reports.

Annual Survey of Production, including:—

- (1) Primary Production: Agriculture, Forestry, Fisheries, Trapping, Mining and Electric Power.
- (2) Secondary Production: Manufactures, n.e.s., Custom and Repair and Construction.
- (3) Explanation of Method.

The National Income of Canada, 1919-1938, Part I.—A general analysis consists of (a) Sections on the Dimensions of National Income Productive Sources, Types of Payment, Gainfully Occupied, Provincial Distribution, Monthly Computation, Disposal of Family Income, Relation to Other Factors, Other Estimates and International Comparisons, and (b) Description of Method, Scope of Inquiry and Method of Approach.

Economic Status, consisting of an outline of Canada's National Income, The Productive Sources of National Income, Income Payments to Individuals, and Personnel.

(Reprint from a Statistical Survey of Public Health in Canada.)

Production

I. ANNUAL SURVEY OF PRODUCTION

Including and differentiating gross and net values of—(1) Primary Production (agriculture, forestry, fisheries, trapping, mining and electric power), (2) Secondary Production (general manufactures, custom and repair, and construction), and (3) Provincial and Per Capita Analyses, with explanation of method. Price 25 cents.

ECONOMIC CONDITIONS IN NOVEMBER

Six major factors indicating the trend of economic conditions averaged about the same in November as in the preceding month. The level during 1943 was higher than in any other period. Marked advances were shown in the indexes of the physical volume of business, the deposit liabilities of the banks and wholesale prices, from the outbreak of hostilities to the present. While some tapering off tendencies were observable during recent months, especially in the volume of productive operations and in bank deposits, the levels reached during 1943 recorded a marked transformation over the depression period of pre-war years. Wholesale prices on the base of 1926 passed through the parity line in an upward direction during the year just ended. The indexes of the physical volume of business and bank deposits showed marked advances over the high interwar trend, establishing new high points in history. High-grade bond prices were steady in 1943. The fluctuations in Dominion bonds since midyear, 1940, have been of minor proportions. Common stock prices recorded a steady advance from August, 1942, to June, 1943. Subsequent to that month moderate reaction was in evidence.

The national income, the most comprehensive measure of economic progress, rose to a new high point in Canadian history during 1943. The cumulative total during the first ten months of the year was \$7,300 million compared with a total of \$6,200 million in the same period of 1942, a gain of 18.3 p.c., representing a marked increase in the volume of economic activity at a somewhat higher price level. Among the generating factors may be mentioned the heavy production of munitions and war supplies, the high level of export trading, deficit financing of the Dominion Government and a considerable advance in the money supply, including bank deposits and circulating media in the hands of the public.

In the October issue of the Monthly Review of Business Statistics, mention was made of recent changes in Government wheat policy, involving the discontinuance in wheat trading on the Winnipeg Grain Exchange, the acquisition by the Canadian Wheat Board of all commercial stocks of wheat in Canada and an initial price to the producer of \$1.25 per bushel for No. 1 Northern in store Fort William or Vancouver. The reasons for the Government's action are given in Order in Council P.C. 7942 of October 12th:

Owing to wartime developments it was considered necessary that the government should exercise greater control over the marketing of Canadian wheat, so that supplies of wheat and wheat flour would be made available at appropriate prices, as required for domestic use and for shipment abroad to countries in receipt of Mutual Aid.

Under the financial arrangements with Canadian flour millers and with countries in receipt of Mutual Aid, the government had been, in effect, the ultimate buyer of large quantities of wheat and at the same time was acting through the Canadian Wheat Board as the farmers' selling agent, thus placing dual and opposing responsibilities upon the government which it was desirable to avoid.

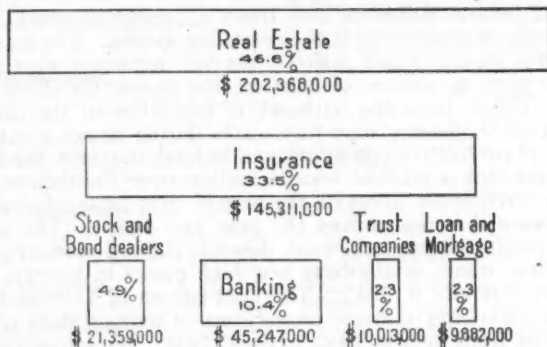

Transportation difficulties and other unusual circumstances had interfered with the normal operations of the existing market machinery. It was also desirable to afford greater certainty to farmers as to prices during the remainder of the present crop year and in the full crop year of 1944-45, and to reduce the abnormal buying margins at country points that had prevailed on the open market.

The production of creamery butter during November was 15.8 million pounds, about 6.8 p.c. below that of November last year and 37.1 p.c. less than in October. Heavy production during the summer season, however, created sizable reserves for winter use. While shipments to Britain reduced holdings to some extent, it is apparent that the quantity still on hand is sufficient to meet requirements. Canada will enter 1944 with the largest cattle population ever reported at the beginning of the year. Since 1937, when Western Canada had severe reductions in herds due to drought conditions, the cattle population has increased by about 500,000. Beef cattle, prospering on ample feed available from the 1942 crop, are averaging many pounds heavier than in past years. Cattle and calves on farms on June 1 numbered 9,600,000 compared with 8,080,000 in 1937.

October coal statistics were not unsatisfactory when compared with the record for the earlier months of the year. Total coal made available for consumption in Canada, that is, the output plus imports less exports, exceeded a year ago by about half a million tons, but this was largely due to an expansion of some 534,000 tons in imports. Domestic output ran slightly less than a year ago, but in comparison with September the daily average production showed a considerable gain, being approximately 50,000 tons a day in October compared with 48,040 in September. The number of men employed in coal mining in October was 24,916, an increase of nearly one thousand over a year ago. The recent strike in Western Canadian coal mines will be reflected in the November statistics. Canadian coal production for the first ten months of the year was 5 p.c. less than in the corresponding period of 1942. Output for the ten months was 14.7 million tons compared with 15.5 million.

The central electric stations produced 3,459 million kilowatt hours during October compared with 3,377 million in the preceding month and 3,174 million in October last year. On the daily basis, this was less than September output, decrease having been shown in secondary power. Total output during the ten months ended October 31 increased to 33,357 million kilowatt hours from 30,757 million in the similar period of 1942. Exports of power to the United States in October totalled 190 million kilowatt hours compared with 207 million a year ago. The total export during the ten months ended October 31 was 2,139 million kilowatt hours compared with 2,036 million.

Operations in the Canadian newsprint industry during November were on about the same basis as in October. A production ratio of 69.2 p.c. compared with 70.1, while the shipment ratio of 70.4 compared with 70.7. Tonnage was off slightly from October, but in both output and shipments small gains were shown in comparison with a year ago. For the eleven month period shipments amounted to 2.7 million tons, a reduction of 6.8 p.c. from a year ago.

Operations in Canadian cotton textile mills during November were at a slightly higher level than in October. Openings last month were 34,867 bales compared with 33,182 bales in October and 40,544 bales in November last year. This was an increase of 5.1 p.c. from the preceding month but a decrease from the year ago comparison of 14.1 p.c. During the first eleven months of 1943, total bale openings were 406,430 compared with 465,152 bales in the same period of 1942, a decrease of 58,722 bales or 12.7 p.c.

Production of wheat flour in Canadian mills during October increased to the highest level so far in the current crop year and set a level unequalled for the particular month since October, 1928. The output was 2.1 million barrels, actually the third highest level for any month since the start of the war, and compared with 2 million barrels in September this year. Compared with October, 1942, the increase was 14.4 p.c.

Further increases occurred in average wages paid workers in Canada's eight leading industries in September with the result that a new high level was reached as of the beginning of October at \$31.48 per week. The increase over the preceding month, 18c. a week, was due in part to the payment of wages and

OPERATING ACCOUNTS OF THE FINANCE GROUP

NOTES TO TABLE A

(a) Finance is the balance wheel of the entire economy, playing a leading role in the national organization. The transactions of the several financial groups are affected, especially in wartime, by the fiscal policy of the Dominion Government. The operations of the banking, insurance, trust and loan companies are under government supervision. Measured by the income originating, the group contributed slightly more than 10 p.c. of the national income of Canada in the 22 years. The annual average income originating was \$435 million, without adjustment for the international balance on dividends and interest.

The aggregate income originating in the six industries comprising the group showed a progressive advance from 1919 to 1928, the only interruption being that of 1925. The net result was an increase from \$291 million in the first year of the period under observation to \$601 million in 1928. An irregular advance was in evidence subsequent to 1933 when the steady decline to \$309 million had culminated. A moderate trend in an upward direction was recorded during the 22-year period from 1919 to 1940. The fluctuation was somewhat greater than in the national income as a whole.

In the finance group, real estate, insurance and banking are the main contributors to the national income. Real estate acquired first place in this connection owing to the inclusion of the value of services rendered by non-farm dwelling houses, stores and office buildings. The services rendered by dwelling houses have a market price, the rent, which makes a direct valuation possible even for houses occupied by the owner. Mortgage interest paid to individuals is also an important component of personal income segregated for convenience under the heading of real estate.

The group includes, in addition, stock and bond dealers, trust companies and loan and mortgage companies.

The income originating in the finance group is the sum of the payments made to individuals and the undistributed profits of the companies operating in the field. Four types of payments are peculiar to the group—interest on savings deposits, interest from insurance and annuity contracts, mortgage interest and net rentals, as paid on rented property and estimated for owner-occupied dwellings.

(b) **Salaries, wages and commissions.**—The salaries were furnished by the Canadian Bankers Association for the chartered banks by the Montreal City and District Bank and by La Caisse d'Economie de Notre Dame de Quebec. Statistics for the Ontario Savings Office and the Province of Alberta Treasury Branches were compiled from the public accounts of Ontario and Alberta, respectively. The payments of the Bank of Canada and Foreign Exchange Control Board were furnished by an officer of the Bank. The salaries and wages paid by the Insurance, Trust Companies and Loan and Mortgage companies were compiled from compendiums of com-

Continued on Page 27

cost of living allowances at higher rates to employees in certain categories, notably in the heavy manufacturing industries. In comparison with a year ago, the average figure of \$31.48 showed an increase of 6.7 p.c., while the October, 1941, level was exceeded by fully 19.3 p.c. If we consider the increase in wages in conjunction with the movement of the cost of living index, it would appear that on balance the lot of the industrial worker in respect to real wages has improved since the gain of 6.7 p.c. for the year in his income compares with a gain over 1.3 p.c. in the cost of living index.

Construction contracts awarded during November were valued at \$14.1 million, a reduction of \$7.9 million or 36 p.c. from the \$22 million reported for the same month in 1942. The winding up of war construction, difficulty of securing labour and materials and government controls designed to channellize money and labour into direct war production are main contributing factors to the decline in construction volume when the national income is at its highest point. Construction contracts awarded for the first eleven months of 1943 totalled \$194 million compared with \$272 million for the same period last year.

The dollar volume of business transacted by wholesale merchants increased 2 p.c. in October over the same month of 1942. The October level conforms with the minor gain of 4 p.c. registered in September. Wholesale sales for the ten-month period ended October 31 were 6 p.c. above sales for the corresponding period of 1942. Retail sales were 10 p.c. higher in October than in September but practically unchanged from October a year ago. The Canadian wholesale trade's inventories continued to contract during October, the all-lines position being some 5 p.c. less than a year ago. Month-to-month reports have shown a decline in total stocks ranging from 5 to as much as 12 p.c. so far this year, September having been down 7 p.c.

Increases in industrial employment which sent the index to a new high level in October were attributed to increasing employment of women. Although the total figures increased during September, the gains were less than normal for the season. The general increase in industrial employment was evenly divided between manufacturing and non-manufacturing classes. Considerable advances were shown in vegetable food, rubber, iron and steel, non-ferrous metal and electrical apparatus plants.

The balance remaining in the unemployment insurance fund was \$157 million. Gross revenues of the fund plus interest earned amounted to \$158.2 million. Of this sum \$128.6 million was contributed by employers and employees through the purchase of stamps and by direct payment and \$25 million by the Dominion Government. The interest amounted to \$3.9 million. Benefits paid from the fund since January, 1942, when benefits became payable, totalled \$1.1 million. The amount paid out in benefits in October amounted to \$23,989 compared with \$195,190 in March of 1943, when the highest peak was reached.

Dividend payments on stocks listed and traded on the Montreal Stock Exchange and Curb Market showed an increase of \$1.7 million in November to \$6.6 million as compared with the same period one year ago. Increased payments were shown in the seven groups, declines in two, while twenty dividend-paying groups were unchanged from that of a year ago. The Federal Government during the first eight months of the fiscal year spent \$1,368 million more than it received in revenues other than borrowing. War expenditures during the eight-month period this year were \$2,242 million compared with \$1,424 million in 1942. Non-war expenses increased from \$349.9 million in the eight months of the last fiscal year to \$403 million in the present fiscal year. All revenue branches except excise duties showed increases. Final compilations show that in the Fifth Victory Loan campaign, which ended early last month, there were 3,008,336 cash applications for bonds worth \$1,383,275,250. In addition, \$188 million worth of Fifth Victory bonds representing 24,715 applications were sold in exchange for other Dominion of Canada bonds which matured or were called for redemption last October 15.

pany accounts, especially the reports of the Superintendent of Insurance, Ottawa, the Canadian Life Insurance Officers Association, the Registrar of Loan Corporations, Ontario and the Summary of Financial Statements of Trust Companies, Quebec. Steps were taken to eliminate payments to insurance personnel operating elsewhere than in Canada. Contributions to pension funds were deducted from gross payments made by life insurance companies. The salaries and wages paid by stock and bond dealers and real estate firms were based on decennial census reports with interpolation by means of index numbers.

(c) Pensions and retiring allowances were estimated for the banking and insurance industries. Contributions to Pension Funds having been deducted from gross salaries, full payment of pensions was included for the two industries.

(d) As the finance group consists mainly of incorporated companies, the withdrawals of working proprietors are of relatively minor importance. The item was estimated for stock and bond dealers and real estate. The numbers were established for ten-year periods by the decennial census returns and the rate estimated as a margin over the per capita salary.

(e) Net dividends were computed for each of the six industries except real estate. The basic information was obtained from annual statements given in "Corporate Securities" and the "Annual Financial Review", the annual reports of the Superintendent of Insurance, Registrar of Loan Corporations, etc. The receipts of dividends by the companies in the group were deducted for the purpose of obtaining the net payments to individuals. No adjustment was made for the adverse balance of international payments, the correction being made at a later stage for the combined total for the seven main groups.

(f) The payments of net interest on bonds and debentures appear as a negative quantity from year to year during the period under observation. The receipts by the financial companies were considerably greater than the payments. The negative balance ranged from \$48 million in 1920 to nearly \$130 million in 1940. The general plan for estimating the receipts of interest by banking companies was to apply a rate to the average value of securities held. The month-end figures published by the Department of Finance were adopted for the chartered banks. The interest received by life insurance companies with Dominion registry was compiled from the company statements given in the report of the Superintendent of Insurance. To estimate the average rate earned, the interest received was divided by the two-year average of the book value of bonds and debentures held by the companies, shown in summary statements of their ledger assets. Interest payments by real estate firms were estimated from information given in the Financial Post's "Survey of Corporate Securities" in the years from 1926 to 1940 inclusive.

(g) Interest on savings deposits was computed for banking, trust, loan and mortgage companies. The monthly averages of notice deposits of the chartered banks for the 22 years were multiplied by a rate which varied from 2.75 p.c. for the period prior to 1933 to 1.375 p.c. from 1937 to the present. Information for four other bank organizations was also obtained. A proportion of the deposit interest was deducted since a considerable amount flows to commercial establishments, pension funds, and non-profit organizations.

Estimated average rates of interest paid were applied to the two-year averages of the guaranteed funds of trust companies. The interest incurred on savings deposits of loan companies was obtained from the official reports, the rate having been the same as used in connection with the trust companies.

(h) INTEREST FROM INSURANCE AND ANNUITY CONTRACTS.

Insurance premiums paid by individuals are considered as current savings and upon a claim being paid that portion which requests a repayment of savings is excluded as consumption of capital. The remaining portion representing the interest on the investment of accumulated savings by the insurance company is included as income. The treatment of annuities follows a similar pattern.

(i) MORTGAGE INTEREST.

The interest paid to individuals on mortgage loans and agreements on non-farm rural and urban real estate was computed in this connection. The first step was the compilation of the total amount of mortgages and agreements of sale outstanding, classified by type of lender. The main classes were financial institutions, government agencies, land corporations, miscellaneous and individuals. The information was obtained from company and public accounts, the annual reports of the Superintendent of Insurance being especially valuable in this respect. Average rates were computed from the records of sample life insurance companies whose mortgage investments in Canada were limited almost entirely to loans on urban real estate. The rate of interest collected by individuals on urban mortgages was taken as being 3 p.c. less than that for financial institutions.

(j) NET RENTALS.

The net rentals of owner and tenant-occupied real estate were computed for urban dwellings, non-farm rural dwellings and commercial stores and office buildings. The decennial census supplied considerable information regarding housing conditions in 1931. The general plan consisted of building up the following estimates:

(a) The number of urban houses, apartments and flats.

(b) A distribution of the two classes between owner-occupied and tenant-occupied dwellings.

(c) The general expenses and net rentals of owner- and tenant-occupied urban, and non-farm rural houses, and of stores and office buildings.

BUSINESS AND PRODUCTION INDEXES, 1919 TO THE PRESENT

Indexes of the volume of production reflect a marked expansion from the outbreak of hostilities to the present. The index of the physical volume of business registered a standing of 124.3 in 1940, exceeding by a wide margin the level of any previous year. The increase over 1929, the culmination of the preceding major economic cycle was more than 13 per cent. The index continued to advance to the present time, the average during the first ten months of 1943 having been about 234. The index is based on 66 factors, embracing mining, manufacturing, construction, electric power and distribution.

As "distribution", consisting of five factors indicating the trend of railway transportation and internal and external trade, fluctuates considerably less than the other sections, the index of industrial production recorded an even greater advance than the more inclusive index of the physical volume of business. The gain in the index of industrial production was more than doubled from 1940 to 1943. The level was 271 in the first ten months of the year just ended, compared with 107.4 in 1939 and 132.4 in 1940.

As shown in the first section of Chart B, manufactures, participating fully in the war effort, show a rise of marked proportions in the last four years. Owing in part to the considerable number of components common to the three indexes of the physical volume of business, industrial production and manufactures, the fluctuations during the period since the last war have followed a similar pattern.

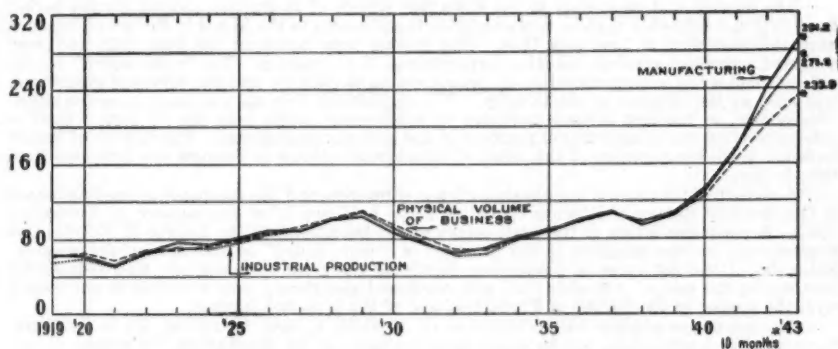

The index of the volume of manufacturing production is compared with two related series in the second section of Chart B. An index of employment in manufacturing plants is prepared by the Employment Statistics Branch from the returns received from employers engaging fifteen employees or more. The index used here has been transferred from the base of 1926 to that of 1935-39 by dividing by the average for the five-year period.

An index of the volume of production was computed by the Census of Industry for the years 1923 to 1941 based on the comprehensive data collected from manufacturers regarding their output in terms of volume. The index of volume (Table B Column C) is weighted according to the values added by the manufacturing process for the purpose of recording accurately the current changes in production. The list of products and weights used in the construction of the index are altered every five years.

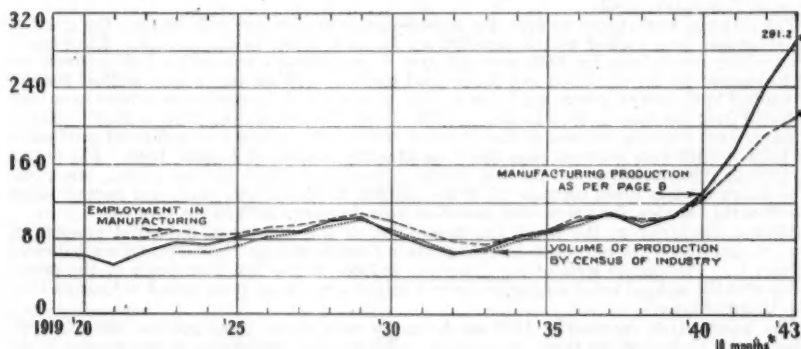

B-RELATION OF MONTHLY INDEXES GIVEN ON PAGE 8 TO OTHER FACTORS 1919-1943

THREE RELATED INDEXES

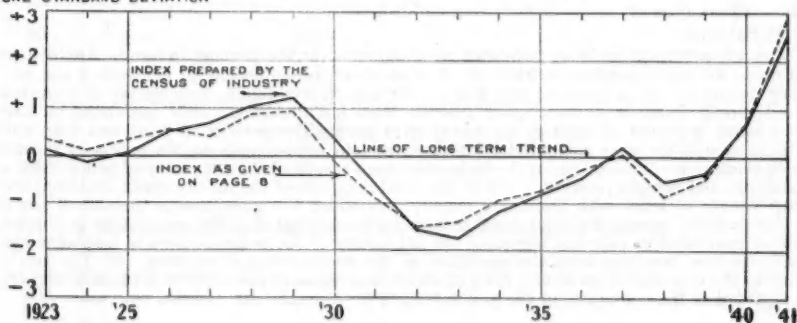

1935-39=100

INDEXES OF MANUFACTURING

RELATIVE FLUCTUATION IN TWO INDEXES OF MANUFACTURING PRODUCTION, 1923-1941

UNIT
ONE STANDARD DEVIATION

The close relationship of the fluctuations of the two indexes, one computed on a monthly basis and the other on an annual footing is demonstrated in the 2nd and 3rd sections of Chart B. While the monthly index published on page 8 of this publication recorded a greater degree of fluctuation, the marked correlation between the two indexes during the period from 1923 to 1941 tends to inspire confidence as to the accuracy of the sample computation.

The similarity of economic cycles in Canada and the United States is indicated by Chart C. The American indexes computed by the research staff of the Federal Reserve system were revised in August, 1940 and in October, 1943. The weighting system was altered in the first revision and the list of components was greatly extended on both occasions. The base period was altered from the 1923-1925 to the five-year period from 1935 to 1939.

The method and basic data of the Canadian system of production indexes for the period from 1919 and following years were presented in Supplements to the Monthly Review of Business Statistics published in 1932 and 1934. The indexes were based on the year 1926 and were weighted according to prices, actual or hypothetical, of that period. The "value added" by the different industries, as determined by the annual census of industry and the survey of production, was used as the measure of relationship. The aggregative formula was used in computation. The system, in the first instance included 45 components, aside from the 18 factors used to determine the trend of agricultural marketings and cold storage holdings. The number of factors included in the computation of the index of the physical volume of business was increased from time to time.

A revision of the index of the physical volume of business and the components was announced in the Monthly Review of Business Statistics, pages 8, 16 and 17 of the number of November, 1942. A recommendation of the draft report of the Secretariat of the League of Nations was implemented by the adoption of the principle of "value added" in establishing the weights. Estimates of the net value of production, signifying the gross operating revenues reduced by subtracting the cost of materials, fuel and purchased electricity, were available in connection with the studies of the Survey of Production and of the National Income.

The list of components was increased to 66 of which 15 were for mining, 43 for manufactures, two for construction, one for electrical power and five for distribution. A system of sub-indexes following the component material classification was instituted. The new list of factors and the weighting system compared with the old was presented on page 17 of the Monthly Review of November, 1942.

The revision, undertaken to give due representation to the factors indicating the trend of war production, was applied to the period from January, 1940, to the present. The general index and the sub-indexes for 1940 were adjusted to constitute a connecting link between the results obtained by the unrevised and the revised methods. While the revised method has not been applied to the period preceding January, 1940, a number of the composite indexes have been transferred from the base of 1926 to that of 1935-39 for the period from 1919 to 1939 inclusive. The transferred monthly indexes of the physical volume of business and industrial production from 1919 to 1942 were given on page 16 of the Monthly Review of August, 1942. The results from 1919 to 1939, inclusive, are the best version presently available for that period, but attention is drawn to data given on page 16 of the number of November, 1942, and current issues of the Monthly Review for the revised statistics from January, 1940 to the present.

Marked similarity in the trend and fluctuation of the indexes of industrial production, manufacturing and of the output of durable goods in Canada and the United States are indicated by Chart C. The higher level of the American indexes in the first nine years of the period suggests that the upward trend during the inter-war years was more pronounced in Canada than in the United States.

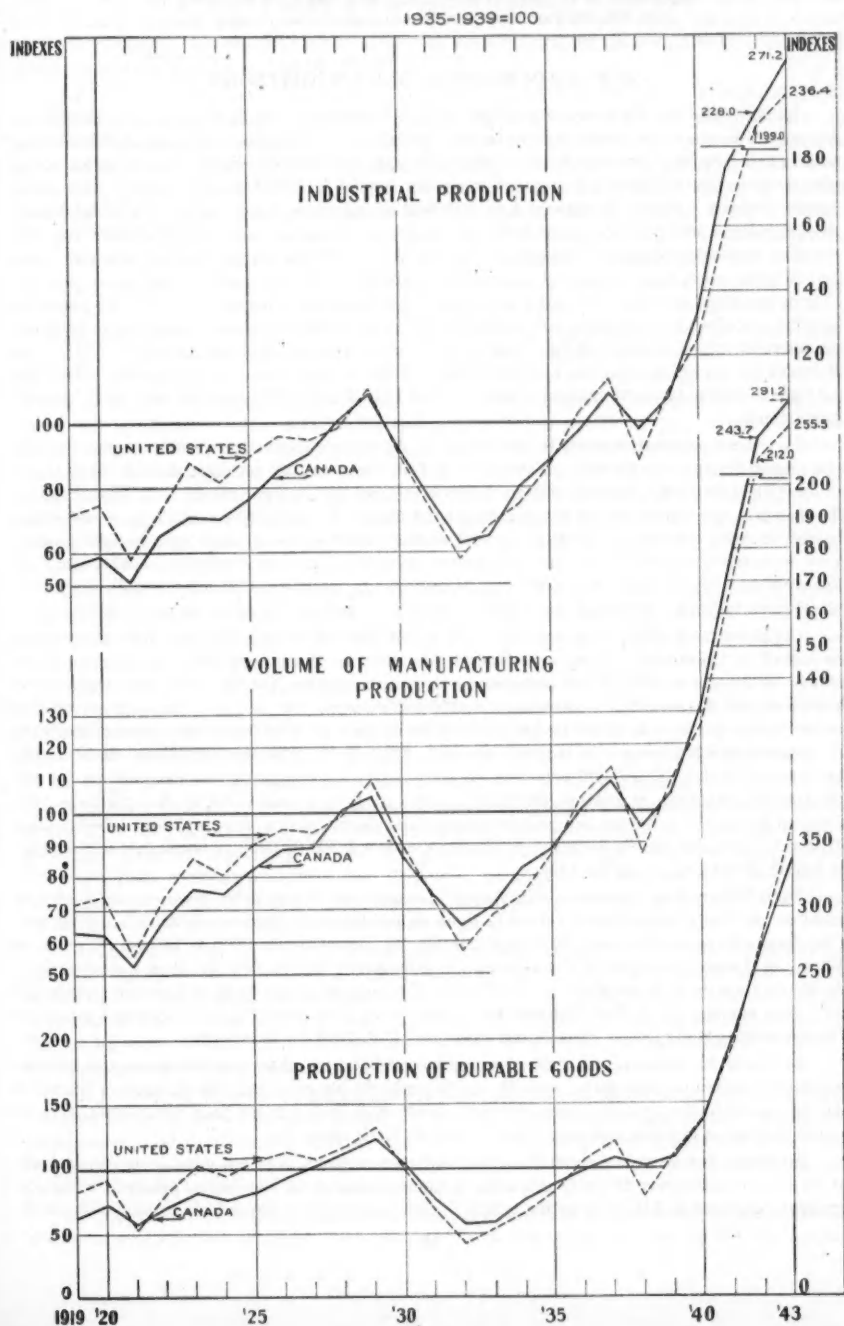

The intermediate reaction in 1938 as shown by each of the three indexes was relatively greater in the United States than in Canada. The extreme fluctuation in the indexes of the output of durable goods is somewhat obscured by the use of a smaller scale in the third section of Chart C than in the first and second sections.

Continued from Page 27

(1) SAVINGS.

The net profits of banks as published were adjusted for the purpose in hand. Deductions were made for bank premises written off, dividends and contributions to pensions if not previously deducted. Such items as transfers to rest and reserve funds, depreciation of securities and additional transfers to contingent reserves were not deducted, while premiums on new capital stock were not allowed as an addition to profits. The savings of trust and loan and mortgage companies were computed by making certain adjustments to the excess of income over expenditures. The savings of the insurance group consist of the net equity of policy-holders in insurance and pension reserves. (1) To the total liabilities of the life insurance, fraternal and mutual benefit societies with Dominion registry was added the gross loss in the sale of assets and shareholders' surplus for joint stock companies was deducted. The net change in the net liabilities computed in this way measured the net equity of the policy-holders in insurance and pension reserves, resulting from the operations of the companies and societies. (2) The yearly change in the total liabilities of fire, fire and other, and casualty insurance of Dominion registry was regarded as the net equity of the policy-holders in insurance and pension reserves.

C-COMPARISON OF PRODUCTION IN CANADA AND UNITED STATES 1919-1942

REVUE MENSUELLE DE LA SITUATION ÉCONOMIQUE

Vol. XVIII

OTTAWA, DÉCEMBRE, 1943

N° 12

STATISTICIEN DU DOMINION: S. A. CUDMORE, M. A. (OXON.), F.S.S., F.R.S. C.
CHIEF, BRANCHE DES STATISTIQUES ÉCONOMIQUES: SYDNEY B. SMITH, M.A.

SITUATION ÉCONOMIQUE EN NOVEMBRE

La moyenne des six facteurs majeurs traçant l'orientation de la situation économique est à peu près la même en novembre que le mois précédent. Le niveau en 1943 est plus élevé qu'en toute autre période. Les indices du volume physique des affaires, des dépôts bancaires et des prix de gros laissent voir des avances marquées depuis le début des hostilités. Bien qu'on puisse observer certaines tendances à la stabilisation au cours des derniers mois, spécialement dans le volume des opérations productives et les dépôts bancaires, les niveaux atteints en 1943 révèlent une transformation marquée en regard de la période de crise avant la guerre. Les prix de gros (sur la base de 1926) dépassent le niveau de 100 et s'orientent à la hausse pendant l'année qui vient de finir. Les indices du volume physique des affaires et des dépôts bancaires laissent voir des gains marqués comparativement à la période entre les deux guerres et touchent de nouvelles cimes dans l'histoire. Les obligations de tout repos sont stables en 1943. Les fluctuations des obligations du Dominion sont faibles depuis le milieu de l'année 1940. Les actions ordinaires montent continuellement d'août 1942 à juin 1943; après ce mois elles baissent modérément.

Le revenu national, mesure la plus complète du progrès économique, s'élève à une nouvelle cime dans l'histoire du Canada en 1943; le total au cours des dix premiers mois de cette année est de \$7,300,000,000, comparativement à \$6,000,000,000 la même période de 1942, augmentation de 18.3 p.c. qui représente un volume plus considérable de l'activité économique et une légère hausse des prix. Parmi les facteurs de cette augmentation, on peut mentionner la forte production de munitions et de fournitures de guerre, le niveau élevé du commerce d'exportation, le financement déficitaire du gouvernement fédéral et une augmentation considérable des disponibilités en espèces, c'est-à-dire des dépôts bancaires et de l'argent entre les mains du public.

Les arrivages de blé s'établissent à environ 95,000,000 de boisseaux du 1er août au 2 décembre, en regard de 121,000,000 la même période de l'an dernier. Les stocks de blé en magasin ou en transit se placent à 362,700,000 boisseaux, soit une diminution considérable comparativement aux stocks de 457,000,000 de boisseaux la même période de l'an dernier. On s'attend que les exportations de blé et de farine de blé augmentent de près de 100,000,000 de boisseaux au cours de la campagne commencée le 1er août dernier. On prévoit exporter 300,000,000 de boisseaux cette année contre 211,500,000 boisseaux en 1942-1943. Le surplus de blé canadien est tel que de grandes quantités pourraient facilement être expédiées à même les stocks existants. On s'attend que seule la hausse des prix occasionne une augmentation des emblavures de blé dans l'Ouest. Le report pour le 31 juillet prochain est estimé à 300,000,000 de boisseaux, soit environ la moitié de celui du 31 juillet 1943.

Dans la livraison d'octobre de la Revue Mensuelle de la Situation Economique, il est fait mention de changements récents dans la ligne de conduite du Gouvernement au sujet du blé. Ces changements comprennent la discontinuation du commerce du blé à la Bourse du grain de Winnipeg, l'acquisition par la Commission Canadienne du Blé de tous les stocks commerciaux de blé du Canada et le paiement au producteur d'un prix initial de \$1.25 le boisseau pour le blé n° 1 nord emmagasiné à Fort William ou à Vancouver. Les raisons qui ont motivé l'action du Gouvernement apparaissent dans l'Ordre en Conseil C.P. 7942 du 12 octobre:

En raison de la marche des événements en temps de guerre, il est jugé nécessaire que le Gouvernement exerce un plus grand contrôle sur la vente du blé canadien, afin de pouvoir fournir à des prix raisonnables des approvisionnements de blé et de farine de blé pour consommation intérieure et pour expédition aux pays bénéficiaires de l'aide mutuelle.

En vertu des accords financiers actuellement en vigueur avec les minoteries canadiennes et les pays bénéficiaires de l'aide mutuelle, le Gouvernement est en réalité l'acheteur ultime de grandes quantités de blé et en même temps il joue, par l'intermédiaire de la Commission Cana-

dienne du Blé, le rôle d'agent de vente des agriculteurs, ce qui lui impose des responsabilités doulbes et opposées qu'il convient d'éviter.

Les difficultés de transport et d'autres circonstances exceptionnelles ont nui au fonctionnement normal des rouages actuels du marché. Il convient aussi de procurer aux cultivateurs une plus grande certitude quant aux prix pendant le reste de la présente année agricole et durant toute la campagne de 1944-1945, et de réduire les écarts anormaux dans les achats, qui ont prévalu à la campagne sur le marché libre.

La production de beurre de crèmerie en novembre cette année est de 15,800,000 livres, environ 6.8 p.c. de moins qu'en novembre l'an dernier et 37.1 p.c. de moins qu'en octobre. La production considérable pendant l'été, toutefois, a créé d'imposantes réserves pour consommation durant l'hiver. Bien que les expéditions à la Grande-Bretagne aient réduit les stocks dans une certaine mesure, il est manifeste que la quantité encore en mains suffit aux besoins. Le Canada commencera l'année 1944 avec le plus grand nombre de bovins jamais relevé au début de l'année. Depuis 1937, alors que les troupeaux avaient grandement diminué dans l'Ouest canadien par suite de la sécheresse, le nombre de bêtes à cornes a augmenté d'environ 500,000.

Les statistiques du charbon en octobre sont assez satisfaisantes en regard des premiers mois de l'année. Le charbon disponible pour consommation au Canada, c'est-à-dire la production plus les importations et moins les exportations, excède la quantité disponible l'an dernier par environ 500,000 tonnes, mais cet excédent est principalement attribuable à une augmentation des importations d'environ 534,000 tonnes. La production canadienne est légèrement supérieure à celle de l'an dernier, mais comparativement à septembre la production quotidienne moyenne laisse voir une augmentation considérable, soit environ 50,000 tonnes par jour en octobre contre 48,040 en septembre. Le nombre d'hommes employés dans les mines de charbon en octobre est de 24,916, augmentation d'à peu près 1,000 en regard de l'an dernier. La grève récente dans les mines de charbon de l'Ouest canadien se reflétera dans les statistiques de novembre. La production canadienne de charbon au cours des dix premiers mois de l'année est de 5 p.c. inférieure à celle de la période correspondante de 1942. La production des dix mois est de 14,700,000 tonnes contre 15,500,000.

Les centrales électriques produisent 3,459,000,000 de kilowatt-heures en octobre, à rapprocher de 3,377,000,000 le mois précédent et 3,174,000,000 en octobre l'an dernier. Etablie sur une base quotidienne, la production est plus faible qu'en septembre par suite d'une diminution de la production d'énergie secondaire. La production des dix mois terminés le 31 octobre augmente à 33,357,000,000 kilowatt-heures, comparativement à 30,757,000,000 la même période de 1942. Les exportations d'énergie aux Etats-Unis en octobre s'établissent à 190,000,000 de kilowatt-heures contre 207,000,000 l'an dernier. Les exportations des dix mois terminés le 31 octobre s'élèvent à 2,139,000,000 de kilowatt-heures comparativement à 3,036,000,000.

Les opérations de l'industrie canadienne du papier à journal en novembre conservent à peu près le même rythme qu'en octobre. Les rendement est de 69.2 p.c. de la capacité de production contre 70.1 p.c., tandis que la proportion des expéditions par rapport à la production est de 70.4 p.c. comparativement à 70.7 p.c.. La production diminue légèrement en regard de celle d'octobre, mais comparativement à l'an dernier la production et les expéditions accusent de faibles augmentations. Les expéditions des onze premiers mois s'établissent à 2,700,000 tonnes, diminution de 6.8 p.c. comparativement à l'an dernier.

Les opérations dans les filatures canadiennes de coton en novembre sont à un niveau un peu plus élevé qu'en octobre. Il s'ouvre 34,867 balles en novembre cette année, à rapprocher de 33,182 en octobre et 40,544 en novembre l'an dernier. Il y a une augmentation de 5.1 p.c. comparativement au mois précédent, mais une diminution de 14.1 p.c. en regard de l'an dernier. Durant les onze premiers mois de 1943, ces filatures ouvrent 406,430 balles contre 465,152 la même période de 1942, diminution de 58,722 balles ou de 12.7 p.c.

La production de farine de blé au Canada en octobre atteint son plus haut niveau depuis le commencement de la campagne courante et établit un record pour ce mois depuis octobre 1928. La production est de 2,100,000 barils; ce niveau est le troisième plus élevé pour tout mois depuis le début de la guerre et se compare à celui de 2,000,000 de barils en septembre cette année. En regard d'octobre l'an dernier, l'augmentation est de 14.4 p.c.

Les gages moyens payés aux employés des huit principales industries canadiennes augmentent encore en septembre et atteignent la nouvelle cime de \$31.48 par semaine au début d'octobre.

L'augmentation de 18c. par semaine en regard du mois précédent est partiellement attribuable au paiement de gages et de bonis de vie chère à des taux plus élevés aux employés de certaines catégories, notamment dans les industries lourdes. La moyenne de \$31.48 laisse voir une augmentation de 6.7 p.c. comparativement à l'an dernier et de 19.3 p.c. en regard de celle d'octobre 1941. Si nous considérons l'augmentation des gages par rapport au mouvement de l'indice du coût de la vie, il semble qu'à tout prendre le sort de l'ouvrier industriel s'est amélioré au point de vue des gages réels, puisque l'augmentation de 6.7 p.c. de son revenu pendant l'année se compare à un gain de 1.3 p.c. dans l'indice du coût de la vie.

Les contrats de construction adjugés en novembre ont une valeur de \$14,100,000, diminution de \$7,900,000 ou de 36 p.c. comparativement à ceux de \$22,000,000 le même mois de 1942. Le parachèvement de la construction de guerre, la difficulté d'obtenir de la main-d'œuvre et des matériaux, ainsi que les contrôles du gouvernement destinés à canaliser l'argent et la main-d'œuvre vers la production directe de guerre sont les principaux facteurs qui contribuent à faire décliner le volume de la construction, alors que le revenu national est à son plus haut point. Les contrats de construction adjugés pendant les onze premiers mois de 1943 se chiffrent à \$194,000,000, à rapprocher de \$272,000,000 la même période de 1942.

Les ventes de gros augmentent de 2 p.c. en valeur en octobre comparativement au même mois de 1942. Le niveau des ventes en octobre ressemble à celui de septembre qui laisse voir un gain de 4 p.c. Les ventes de gros au cours de la période de dix mois terminée le 31 octobre excèdent de 6 p.c. celles de la période correspondante de 1942. Les ventes de détail en octobre augmentent de 10 p.c. comparativement à septembre, mais elles n'offrent à peu près pas de changement en regard d'octobre l'an dernier. Les stocks des marchands de gros au Canada continuent de se contracter en octobre et sont d'environ 5 p.c. moins considérables que l'an dernier. Les rapports d'un mois à l'autre laissent voir des déclin variant de 5 p.c. à 12 p.c. à date cette année; en septembre la diminution est de 7 p.c.

L'augmentation de l'emploiement industriel, qui porte l'indice à une nouvelle cime en octobre, est due à l'embauchage d'un plus grand nombre de femmes. Bien que l'emploiement augmente en septembre, ce gain est moins que normal pour la saison. L'augmentation générale de l'emploiement industriel est également répartie entre les industries manufacturières et les industries non manufacturières. L'emploiement augmente considérablement dans les fabriques de conserves de légumes, de caoutchouc, de fer et d'acier, de métaux non ferreux et d'appareils électriques.

Le solde de la caisse d'assurance-chômage est de \$157,000,000. Les recettes brutes de la caisse plus l'intérêt gagné se chiffrent à \$158,200,000. De cette somme, les employés et les patrons fournissent \$128,600,000 par l'achat de timbres et le paiement direct, tandis que le gouvernement fédéral contribue pour \$25,000,000. L'intérêt s'élève à \$3,900,000. Les prestations payées à même la caisse depuis janvier 1942, alors qu'elles devinrent payables, se chiffrent à \$1,100,000. La somme déboursée en prestations en octobre se place à \$23,989 contre \$195,190 en mars 1943, alors qu'un maximum a été atteint.

Les paiements de dividendes sur les valeurs inscrites et négociées à la Bourse et au Curb de Montréal se chiffrent à \$6,600,000 en novembre et augmentent de \$1,700,000 comparativement à la même période de l'an dernier. Les paiements de dividendes augmentent dans sept groupes, diminuent dans deux et restent les mêmes dans vingt autres comparativement à l'an dernier. Le gouvernement fédéral, durant les huit premiers mois de l'année fiscale, dépense \$1,368,000,000 de plus qu'il ne reçoit de sources autres que les emprunts. Les dépenses de guerre pendant les huit mois de cette année se chiffrent à \$2,242,000,000 contre \$1,424,000,000 en 1942. Les dépenses autres que pour la guerre augmentent de \$349,900,000 au cours des huit mois de l'an dernier à \$403,000,000 cette année. Il y a des augmentations pour toutes les sources de revenus sauf celle des droits de douane. Les compilations définitives indiquent que lors de la campagne du cinquième emprunt de la victoire, terminée au début du mois dernier, il y a eu 3,008,336 souscriptions en espèces pour des obligations d'une valeur de \$1,383,275,250. En outre, des obligations du cinquième emprunt de la victoire d'une valeur de \$188,000,000 et représentant 24,715 souscriptions ont été vendues en échange d'autres obligations du Dominion du Canada qui devenaient échues ou qui ont été rachetées le 15 octobre dernier.

PUBLICATIONS ISSUED BY THE DOMINION BUREAU OF STATISTICS

PUBLICATIONS OF THE DOMINION BUREAU OF STATISTICS ISSUED DURING THE MONTH ENDING DECEMBER 16, 1943

Consumption.—Food Consumption in Canada, 8 p.

Population.—Eighth Census of Canada, 1941, Households and families, No. H F-2 (Eng. and French) 7 p., 10 cents. Bathing facilities in Canadian dwellings (Eng. and French) (Prel. housing No. 35), 4 p. Population No. A-16, Population by sex, age, conjugal condition, etc., for the social areas of Vancouver and Winnipeg (Eng. and French), 29 p., 2 maps. Population No. B-2, Nova Scotia; Racial origin by conjugal condition, age, etc. (Eng. and French), 21 p., 10 cents. Population No. B-3, New Brunswick; Racial origin (Eng. and French), 21 p., 10 cents. Preliminary housing No. 34. Automobiles, radios, telephones and vacuum cleaners (Eng. and French), 4 p.

Institutions.—Annual report of hospitals in Canada for the year 1941 (Eng. and French), 83 p., 25 cents.

Production.—**AGRICULTURAL PRODUCTS.**—The grain situation in Argentina, Nov. 23, 1943, v. 3 No. 1, \$1 a year. Value of Canadian field crops, 1943, 5 p., \$2 per year. **CENSUS OF AGRICULTURE.**—Bulletin No. 73, Canada: Area, production and value of vegetables, 1940 and area, 1941 (Eng. and French), 9 p., 10 cents. Bulletin No. 74, Canada; Fruits and nursery products; value and production, 1940, number of trees, 1941 (Eng. and French), 9 p., 10 cents.

Manufactures.—Weekly earnings and hours of work of male and female wage earners employed in the manufacturing industries of Canada, 1941, 31 p., 25 cents. **FOODS.**—Report on the biscuit, confectionery cocoa and chocolate industries in Canada, 1942, 11 p., 25 cents. The macaroni and kindred products industry in Canada 1942, 7 p., 25 cents. Report on the fruit and vegetable preparations industry in Canada, 1942, 19 p., 25 cents. **TEXTILES.**—Report on the woollen textile industries in Canada, 1941, 34 p., 55 cents. Report on the oiled and waterproofed clothing industry in Canada, 1942, 9 p., 15 cents. **FOREST PRODUCTS.** The boat-building industry, 1942 (Eng. and French), 3 p., 10 cents. Lests, trees and wooden shoe findings, 1942 (Eng. and French), 2 p., 10 cents. Report on the rubber industry in Canada, 1942, 15 p., 25 cents. **NON-METALLIC MINERALS.**—The artificial abrasives industry, 1942, 5 p., 15 cents. The sand-lime brick industry, 1942, 3 p., 10 cents.

Education Statistics.—Libraries in Canada, 1940-42 (being part III of the Biennial survey of education in Canada, 1940-42), 36 p., 35 cents.

Internal Trade.—Retail merchandise trade in Saskatchewan, calendar year 1941, final report, 30 p., 25 cents. Retail merchandise trade in Alberta, calendar year 1941 final report, 29 p., 25 cents.

Social Analysis.—The control and sale of liquor in Canada, 42 p., 25 cents.

Transportation, Communications and Public Utilities.—Changes in single-track mileage operated by steam railways of Canada, 1942, 2 p. Shipping report, year ended December 31, 1942, 65 p., 25 cents. International bridge, tunnel and ferry companies, 1942, 10 p., 15 cents. Preliminary report, provincial revenues from motor vehicle registration, etc., and gasoline taxes, 1942, 1 p., 10 cents. Civil aviation in Canada, 1942, 6 p.

2. PUBLICATIONS REGULARLY ISSUED BY THE DAY, WEEK, MONTH OR QUARTER

Daily Bulletins.—The daily bulletin (Eng. and French)—\$1.50 per year.

Weekly Bulletins.—Canadian grain statistics. Carloadings of revenue freight. Security prices and foreign exchange. The weekly bulletin, \$1.00 per year. Weekly index numbers of wholesale prices. Weekly summary of the wheat situation.

Monthly Bulletins.—Advance preliminary statement, stocks of butter, cheese and eggs in the principal cities of Canada. Agricultural statistics (Eng. and French). Asphalt roofing production. Asphalt roofing sales. Boot and shoe production. Building permits. Canadian fruit and vegetables. Canadian milling statistics. Central electric stations—output. Cheques cashed against individual accounts. Civil aviation—operating statistics. Coal and coke. Concentrated milk products. Current trends in food distribution. Dairy and poultry products. Dairy production—review. Employment and payrolls. Financing of motor vehicles. Fish—stocks. Freight traffic of railways. Fruit crop report. Grain situation in Argentina. Hides and skins. Indexes of country general store sales. Indexes of retail sales, Indexes of wholesale sales. Leading minerals. Meat and lard—stocks. Pig iron, steel and ferro-alloys. Railway revenues, expenses, incomes and operating statistics. Review of business statistics. Sales and purchases of securities between Canada and other countries. Steel ingots. Tobacco crop report. Vital statistics; births, deaths and marriages registered in Canada. Wheat situation.

Quarterly Bulletins.—Galvanized sheets. Review of Canadian coarse grains. Sales of storage batteries. Stocks of canned fruits and vegetables. Stocks of unmanufactured tobacco on hand. Telegraphic crop reports. Vital statistics in Canada.

For the publications listed above application should be made to the Dominion Statistician, Dominion Bureau of Statistics, Ottawa.

The complete service of all publications issued by the Bureau (with the exception of news bulletins) may be obtained for a special rate of \$30 per annum.
